WHERE SHOULD I GO FOR CARE?

EMERGENCY DEPARTMENT

Our emergency departments, located in Frick, Latrobe and Westmoreland hospitals, treat people with conditions ranging from minor injury and illness to life threatening injuries or illness requiring immediate care such as:

- Difficulty breathing
- Fainting
- Chest pain or pressure
- Uncontrolled bleeding
- Coughing or vomiting blood
- Sudden or severe pain
- Poisoning
- Major injuries, such as broken bones
- Loss of consciousness
- Sudden facial drooping or weakness in an arm or leg, unexpected paralysis
- Falls, auto accidents
- Head injury
- Severe or persistent abdominal pain
- Severe headache
- Drug overdose

For these symptoms or any other health problem you believe is life threatening, call 9-1-1 or go to the nearest emergency department.

URGENT CARE

At MedExpress, little things, like a skinned knee, can be treated at home. Life threatening conditions, like chest pains, require a trip to an emergency department. For everything else, there’s urgent care.

MedExpress offers treatment to patients of all ages for injury and illness, like the flu, asthma attacks, broken bones, cuts requiring stitches and more, providing you a one-stop option for unscheduled, time-sensitive care. With a full medical team and no appointment necessary, you can take comfort in knowing that great care will always be there when you need it. Just visit Excela’s MedExpress partners in Greensburg, Jeannette, Latrobe, Mount Pleasant, Murrysville and North Huntingdon. For more information, visit www.medexpress.com.

Conditions we treat include:
- Sprains, strains and broken bones
- Cuts, scrapes, abrasions and burns
- Colds, flu or viral illness
- Bronchitis/Pneumonia
- Asthma attacks
- Bee stings, insect bites and allergic reactions
- Flu shots
- Fever

For these symptoms or any other health problem you believe is life threatening, call 9-1-1 or go to the nearest emergency department.
A primary care physician (one whose specialty is family medicine, internal medicine or pediatrics for children up to age 18) is the health care provider who is your main point of contact for continuing care. He or she coordinates your care, makes referrals to specialists if needed, and identifies and treats common medical conditions. Your primary care doctor can provide:

- Preventive care
- Routine check-ups
- Sports physicals
- Management of conditions such as diabetes, high blood pressure, heart disease and others
- Immunizations and vaccinations
- Health maintenance
- Treatment of acute illness such as flu, bronchitis, sinusitis, cough, cold and sore throat

For these symptoms or any other health problem you believe is life threatening, call 9-1-1 or go to the nearest emergency department.
